# ABOUT US

**Hanu Industries** is a reputed name in the Rubber Industry, Established in the year 1992, by **Mr. Surender Makharia**, specialises in Manufacturing of Rubber Extruded, Molded, formed & mandrel hoses for application in Automobiles, Architectural, Railways & many other industries. We have grown by leaps and bounds and entrenched ourselves as the most accomplished manufacturing company of Rubber Products, Combining the experience and engineering skills of our team with the cutting edge technology, we manufacture products that are known for their strength and reliability in both national as well as international markets. We have a world class infrastructure consisting of latest machinery and in-house testing facilities to keep complete control over the manufacturing process. Our comprehensive quality control procedures of international standards help us to remain far ahead of our competitors.

**HANU INDUSTRIES** has well equipped plant with latest machinery and a separate well furnished Laboratory to maintain quality as per ISO norms, having well developed infrastructure facilities. The company has evolved into professionally managed business house run by highly motivated team of energetic and experienced professionals ably supported by their executives, who with the involvement of latest technology, are always inclined to produce quality products of international standards.

**HANU INDUSTRIES** has been well accepted as a mark of reliability. Having been an ISO-9001 certified company, the rigorous quality system implemented through out all manufacturing process starting from the selection of raw materials and mixing of rubber compounds to completion of the final product ensures high precision, patient heat resistance, good chemical stability and long term durability. This Quality Control system has made its products well acceptable to its benign customers all Over the globe.

## FABRICATION & JOINING

In some applications you may require multiple extrusions to be joined together. This may be to create a watertight seal, or to fit in or around a specific object or bend radius. We employ a variety of rubber to rubber Jointing solutions in order to create a secure joint. This is often much more cost and time efficient than creating a profile mould, while still providing excellent join strength and flexibility.

## MATERIAL COMPOUND FLEXIBILITY

We can offer a wide choice of material compounds, grades and finishes. Depending on your application, a solid rubber extrusion may be too hard and not flexible enough, and we offer a wide selection of sponge rubber profiles. We can also provide composite extrusions with are typically manufactured from two or more different materials, and work directly with material compounders to select a material that perfectly suits your application.
