Ecowool Glasswool

Ecowool Glasswool is the most accepted form of insulation material used globally because of its phenomenal thermal and acoustic properties. It is predominantly used in applications with service temperatures up to 250 degree celsius (in some cases up to 400 degree celsius). Ecowool Glasswool insulation products are made of very fine and long inorganic fibers (fiberglass). The production process involves melting, fiberizing and bonding of glass fibers using high temperature binder. These fibers are spread across uniformly to trap millions of air pockets generating a wool like laminar structure.

Ecowool Application Segments

- Pre-Engineered Metal Buildings – Factory, Warehouse, Supermarket, Showrooms, Aircraft hangar etc.
- Public and Residential buildings – wall and roof insulation, facade, drywall and acoustic panels.
- Heating Ventilation and Air conditioning- duct-thermal, acoustic and mechanical rooms.
- Textile Mills- roofing and humidification duct.
- Transport- trains, metro coaches, railway coaches, AC buses.
- Automotive insulation (moulded) parts.
- Marine- naval shipbuilding.
- Cold storage
- Solar- water heater and tank insulation.
- Power plants- chimney, ESP, water pipes and vessels.
- Cryogenic application – LNG tanks.
- Other various appliances and laboratory equipment.

Ecowool Glasswool can safely be used for shed roofing, office buildings, entertainment places, heating ventilation and air conditioning and for residential and industrial buildings. Glasswool can also be used for false ceiling in for various industrial purposes. The glasswool is tested on various parameters before supplying to customers .

Rockwool

We know the importance of having a quiet space in your home and garden. That's why our provide peace of mind that your environment won't be affected by external noise factors. If you're looking for a meditative space in your shed, we can help you achieve it.
ROCKWOOL insulation can assist you in soundproofing a shed, and providing fire protection that's tested to the highest possible standards.

Rockwool is:

- **Sustainable** – made from recyclable products, and part of a circular system.
- **Water repellent** – keeps out rain and moisture and protects your belongings.
- **Long-lasting** – will last the lifetime of its application.

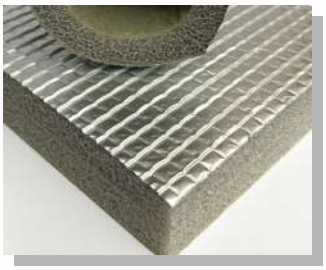

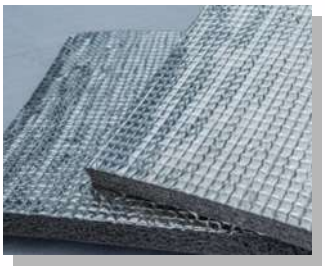

XLPE Insulation

XLPE insulation sheets are closed-cell, polyethylene-based foam sheets known for their exceptional thermal and acoustic insulation properties. The cross-linking process creates a stronger, more durable, and more resilient material than standard polyethylene foam. This makes XLPE sheets suitable for demanding industrial and construction applications.

Application

- HVAC systems
- Construction
- Industrial
- Automotive
- Sports and leisure
- Packaging

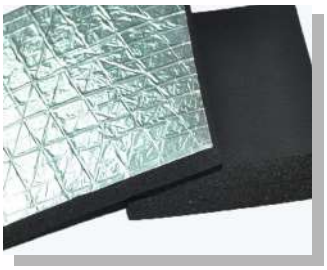

Aerofoam Nitrile Rubber

Aerofoam Nitrile Rubber/Tube Insulation is an elastomeric foam that is based on synthetic rubber. It is a flexible insulation material that provides protection against water vapor because of its closed cell structure. It is available in the form of sheets and tubes. The thicknesses available are 6mm, 9mm, 13mm, 19mm, 25mm, 32mm. It is black in color.

Advantages

- Provides effective insulation in large temperature range environments ranging from -50 to 105 degrees C.
- Very low thermal conductivity properties result in excellent insulation for AC ducts, Chilled water pipelines, copper pipelines, drain pipelines, etc.
- Very high water vapor diffusion resistance properties resulting in negligible water absorption.
- Class O provides top notch fire performance as per the building regulations

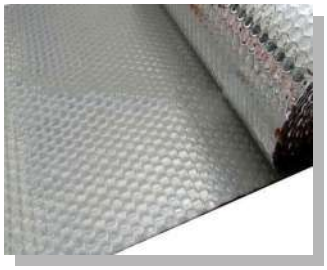

Bubble Insulation

Bubble Sheet is a "Bubble product. These sheets are in various thicknesses starting from 4mm up to 20mm. Bubble contains a dual layer of fire-retardant air bubble film laminated with both sides of pure aluminum foil.

Bubble sheet is an innovative and high-performance insulation solution designed for various applications. It is a unique "Bubble" product with excellent thermal insulation properties. Our guarantees a high-quality product that is both efficient and durable.

INDIAN GLASSWOOL INDUSTRIES

Corp Off Add : 301, RG CITY CENTER, Lawrence Road near Keshav puram metro station, New Delhi - 110035
