Complete Solution ERP Software

General

ORDER PROCESSING

A complete module covers all aspects of order processing starting with customer inquiry and ending with delivery of the order and follow up processes such as customer complaint management. The module generates all documents such as the proforma reports. The order processing module covers configuration of the products which directly feeds into production module.

PRODUCTION

A comprehensive production module covers the entire manufacturing process. It starts with raw materials store and takes the production process through all work centres until the final product is produced and has been put through QC. This flexible and comprehensive module can be used to track production of products with any number of layers.

MAINTENANCE MODULE

The maintenance module incorporates both preventive maintenance and breakdown tracking. Complete maintenance schedule can be maintained in the system. Breakdowns are recorded in the system with details such as hours of productivity lost and cost of repair. The maintenance module integrates with the financial accounting module to track cost of maintenance.

PURCHASE & INVENTORY MODULE

The purchase and inventory modules covers indent generation, purchase order generation, goods receipt note (GRN) preparation, and issue of materials. It also incorporates all approvals needed during the purchase cycle. This comprehensive module deals with requirements such as generating multiple GRN for a purchase order or generating single GRN for multiple purchase orders. It also provides for calculation of landed cost.

FINANCIAL ACCOUNTING

This module implements a comprehensive financial accounting solution. It has been designed with extensive inputs from customers and accountants. It allows for complete branch wise accounting along with consolidated reporting for the company. It generates a wide range of reports for online viewing and printing. It also supports export of data in spreadsheet file format. It extensively covers taxation and regulatory requirements.

CRM

A comprehensive customer relationship management module is included. This module can be accessed by customers sales and marketing person from anywhere as it is a web based solution. Sales persons can manage leads, schedule meetings, register outcome of meetings, track customer complaints and track order status online. Customer can view order status and download account statement.
